Activity:

The activity of the Vehicle Validation System Engineer involves planning, executing, and validating systems, ensuring compliance with technical specifications, and managing documentation and reporting.

ADAS systems: LSS(Lane Support System) /LCA (Lane Centering Assist) y Parking

Tasks:

- Planning and executing system validation, ensuring compliance with technical specifications and schedules.
- Defining and executing validation plans, including vehicle and component validations.
- Managing and reporting system maturity, bug analysis, and bug resolution using tools like LUP/JIRA and CANalyzer.
- Ensuring technical risk management and understanding system tuning and optimization.
- Creating and maintaining ADAS-related documentation, including configuration dossiers (DDCR, DDMRS) and compliance matrices.
- Supporting homologation activities and preparing vehicles and documentation for homologation validation.
- Participating in NCAP tests and ensuring safety requirements are met (FMRS/DDMRS).
- Collaborating with stakeholders to ensure the successful integration and functionality of ADAS systems...

Level of training and experience:

- Degree in Electronics, Telecommunications, or Mathematics Engineering.
- 1-2 years of experience in vehicle electronics, focusing on programming, validation, and automated testing.
- Familiarity with vehicle systems, including MTC.
- Experience with tools like CANalyzer for logging and analysis.
- Experience in planning and tracking validation plans.
- Knowledge of technical documentation (configuration dossier, DDCR, DDMRS).
- Strong problem-solving skills for addressing technical issues during tests and validations.
- Driving license.
