

# ODIS Diagnostic Support w. German

**Workplace:** 550025, Sibiu

Apply online!

## What to expect:

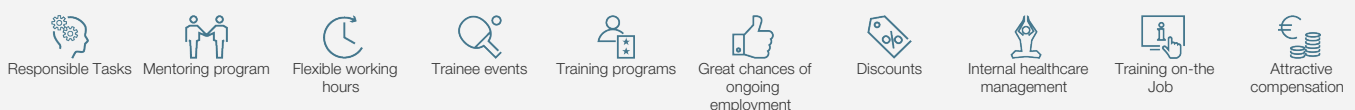

- **Test Analysis and Planning:** Conduct test analysis and planning for ODIS service releases, including regression tests, validation of new user requirements, and retesting of solutions to reported errors.
- **Support Automation:** Identify test cases with high automation potential and collaborate with test automation engineers to create scripts for automated testing.
- **Analysis of Support Requests:** Analyze incoming support requests for published ODIS service versions, process inquiries, and communicate solutions to users.

## What you bring along:

- German and English language required.
- Proficient in handling ODIS service diagnostic systems (software and hardware).
- Expert knowledge of diagnostic services, vehicle architectures, and ECU networking.
- Familiarity with diagnostic protocols.
- Experience with test management tools (e.g., ALM, Salesforce) and support processing systems.
- Strong analytical and problem-solving skills, with experience in project-related teamwork and coordination.

The ODIS Diagnostic Support Specialist will be responsible for providing technical support and analysis for the Offboard Diagnostic Information System (ODIS) used by the customer. This role involves testing, troubleshooting, and supporting the deployment of ODIS service releases and customer's Guided Fault System (GFS) diagnostics.
