

Technical drivers

Workplace: M2 4WU, Manchester

[Apply online!](#)

What to expect:

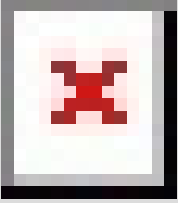

- You will support the driver assistance systems (ADAS) of the future.
- From the laboratory to the road! You will be responsible for capturing the specifications all the way through commissioning the first prototypes.
- You will participate in test and application drives possible across UK and Europe
- Component testing, vehicle trials, and validation of results fall within your area of responsibility
- You will handle the validation of components, vehicle testing, and documentation of the results
- You will work closely with internal and external experts within the project environment

What you bring along:

- A clean UK driver's License
- Successfully completed training as an automotive mechatronics technician, along with several years of relevant professional experience in the automotive sector
- Ideally, you have completed further training as a certified technician or hold a master craftsman qualification
- You have an interest in innovative technologies and have already gained initial experience with driver assistance systems
- Initial contact with vehicle communication systems/bus systems (CAN) is advantageous
- The work location - UK cities!

WE move, WE develop, WE transform – together as a team with our colleagues.

Curious? Then we look forward to receiving your application!
