Java software engineer (f/m/x) in the automotive branch

Workplace: 70173, Stuttgart

Apply online!

What to expect:

- **Develop solutions:** As part of an agile team, you realize innovative software solutions for customers in the automotive sector
- **Maintain an overview:** Accompanying the entire process – from concept development to testing to go-live – is part of your tasks
- **Practice cooperation:** You design Java-based applications in a team for and with our customers and implement them
- **Create added value:** Your ideas and impulses help our customers to successfully improve their projects

What you bring along:

- You have a **degree** in the field of (business) informatics or **relevant professional experience**
- You have already demonstrated your knowledge of **Java**, **Java EE** or **Golang** in your own projects
- Your experience in working with **cloud solutions** like AWS or Azure and **backend technologies** like databases or microservices is solid
- Spring Boot, microservices, Kubernetes, Docker, Jenkins, GitLab are not foreign words to you
- An **agile mindset** and good knowledge of the German and English language complete your profile

You are eager for a new challenge and want to prove your talents in an innovative environment? As part of a project for a well-known customer in the automotive industry, we are looking for you to work in a dynamic environment on sophisticated solutions for the vehicles of tomorrow. In addition to working on promising topics within our open corporate culture, Bertrandt offers the necessary freedom to shape your own personal career.

What we offer:

| Mentoring program | Flexible working hours | Canteen | Trainee events | Training programs | Sport activities | Parking spaces |
