

Function Development Engineer with German

Workplace: 550052, Sibiu

[Apply online!](#)

What to expect:

- In the constantly growing and innovative electromobility market, you will develop functions for the area of drive systems in an agile context and support them throughout the entire V-model.
- Development of new functions (from use cases and functional profiles to concept work and the formulation of functional requirements)
- Adaptation and coordination of requirements for components and interface functions in the system network
- Application and implementation of electromobility standards
- Design and extension of functional models

What you bring along:

- Completed degree in electrical engineering, mechatronics, mechanical engineering, automotive engineering, control engineering, or a scientific degree with a technical orientation, or similar
- Passion for the topic of eMobility and advanced knowledge
- Experience with Codebeamer, Doors, PTC Integrity, or similar tools in requirements management as well as in Jira or other ticket systems
- In-depth experience and knowledge in the area of model-based software development in CAMEO and Matlab
- Development experience in the OBD context
- Familiarity with agile project management structures
- Confident communication skills in English
- Communicative and a team player
- Agile, independent, and reliable work ethic
